

TEST PLAN

Authorized Partner Platform — Complete Signup Automation

Field	Details
Project Name	Authorized Partner Website Testing
Module/Feature	Complete User Signup Automation
Version	1.0
Date	06/23/2026
Prepared By	Kabir Khadka
Reviewed By	Vrit Technologies QA Team

1. Introduction

1.1 Purpose

This document describes the test plan for automating and testing the complete signup functionality of the Authorized Partner website. The purpose is to ensure the entire registration flow works correctly from initial navigation through final verification without manual intervention.

1.2 Project Overview

Authorized Partner is a platform connecting recruitment agents with global education opportunities. The signup process is critical for onboarding new agency partners and requires comprehensive automated testing to ensure reliability and user experience.

2. Test Objectives

- Automate complete end-to-end signup flow without manual intervention
 - Verify each signup phase completes successfully
 - Ensure proper form validation across all pages
 - Validate navigation flow between signup stages
 - Test error handling for invalid inputs
 - Verify OTP verification mechanism works correctly
 - Validate agency details and professional experience forms
 - Ensure final verification completes successfully
 - Generate comprehensive test reports
-

3. Scope

3.1 In Scope

- ☒ Homepage navigation (Login button click)
- ☒ Login page to signup transition
- ☒ Terms & Conditions acceptance
- ☒ Signup form submission (all fields)
- ☒ Email field validation
- ☒ Phone number validation
- ☒ Password validation and confirmation
- ☒ Country code selection (+977)
- ☒ OTP verification process (automated via IMAP)
- ☒ Agency details form completion
- ☒ Professional experience form submission
- ☒ Final verification process & document upload
- ☒ Navigation flow between pages
- ☒ Automated screenshot capture on failures
- ☒ Test execution reporting

3.2 Out of Scope

- ☒ Backend API testing
- ☒ Database validation
- ☒ Email delivery testing
- ☒ Performance and load testing
- ☒ Security penetration testing
- ☒ Cross-browser testing (Chrome only for automation)
- ☒ Mobile app testing

4. Test Strategy

Attribute	Details
Test Approach	Automated Testing using Selenium WebDriver
Test Type	Black Box Testing
Design Pattern	Page Object Model (POM)
Test Levels	Functional, Integration, End-to-End, UI, Validation
Test Techniques	Boundary Value Analysis, Equivalence Partitioning, State Transition, Error Guessing, Positive/Negative Testing

4.1 Automation Framework

- **Language:** JavaScript (Node.js)
- **Test Framework:** Mocha with Mochawesome Reporter
- **Automation Tool:** Selenium WebDriver 4.39.0
- **Driver Management:** Selenium Manager (auto-manages ChromeDriver — no manual setup needed)
- **Design Pattern:** Page Object Model (POM)

5. Test Environment

Component	Details
Operating System	Windows 11
Browser	Google Chrome 149.x
Node.js	v18+ (LTS)
ChromeDriver	Auto-managed by Selenium Manager
Selenium WebDriver	4.39.0
Mocha	11.7.5

5.1 Test URLs

- **Production:** `https://authorized-partner.vercel.app`
- **Signup Flow:** `https://authorized-partner.vercel.app/register`

5.2 Test Data

Field	Strategy	Sample
Email	Dynamic (plus-addressing)	<code>vritqa.test2025+[timestamp]@gmail.com</code>
Phone	Randomly generated	<code>98XXXXXXX</code>
Country Code	Fixed	<code>+977 (Nepal)</code>
Password	Static	<code>SecurePass123!</code>
Document	Static asset	<code>assets/shared_image.jpg</code>

6. Test Deliverables

Before Testing

- Test Plan (this document)
- Test Scenarios & Test Cases (Excel)
- POM classes for each signup page

During Testing

- Execution console logs
- Bug reports with screenshots (stored in `bug-reports/`)

After Testing

- Mochawesome HTML Report (`test-reports/index.html`)
- PDF Test Report (`test-reports/TEST_REPORT.pdf`)
- Bug Report (`bug-reports/Bug_Reports_Signup_Authorized_Partner.xlsx`)
- GitHub Repository with full source code

- Demo Video (`video/Demo_Video.mp4`)

7. Entry Criteria

- ☒ Signup flow is accessible on production URL
- ☒ All signup pages are functional
- ☒ Test environment is stable and test data is prepared
- ☒ Automation framework and Page Object classes are created
- ☒ Selenium Manager is configured (no manual driver installation needed)

8. Exit Criteria

- ☒ All planned test scenarios executed with 100% automation coverage
- ☒ No Critical or High severity bugs are blocking the flow
- ☒ HTML test report, Demo video, and Documentation are complete
- ☒ Code is pushed to the public GitHub repository

9. Test Schedule

Phase	Duration	Target Date
Test Planning & Scenario Creation	2 days	Day 1–2
Framework Setup & Page Object Creation	3 days	Day 2–4
Test Case Design	1 day	Day 4
Automation Script Development	2 days	Day 4–5
Test Execution, Debugging & Bug Reporting	1 day	Day 5
Report Generation & Demo Recording	1 day	Day 5
Documentation & Submission	1 day	Day 5
TOTAL	~5 days	Within Deadline

10. Resource Allocation

Role	Name	Responsibility
QA Intern	Kabir Khadka	Automation Development & Execution
QA Reviewer	Vrit Technologies QA Team	Review & Guidance
Stakeholder	Vrit HR Team	Evaluation & Assessment

11. Risks & Mitigation

Risk	Mitigation Plan
Website UI changes	Implement flexible locator strategies (multiple fallback selectors)
OTP verification delays	Add sufficient wait times; automated IMAP retrieval with 12 retry attempts
Network connectivity issues	Test in a stable network environment
ChromeDriver version mismatch	Selenium Manager auto-detects and downloads the correct version
Flaky tests due to timing	Use explicit waits; avoid hard-coded <code>sleep</code> calls where possible

12. Assumptions

- Website will remain accessible and the signup flow will not have major UI changes.
- Gmail plus-addressing will work for unique email generation on each run.
- No rate limiting on signup attempts will be enforced during testing.

13. Dependencies

- Availability and stability of the production website.
- Internet connectivity for automated OTP retrieval via IMAP (Gmail).

14. Defect Management

14.1 Severity Levels

Severity	Description
Critical	System crash / complete feature failure
High	Major function is broken, blocks workflow
Medium	Validation or partial functionality issue
Low	UI / Cosmetic issue

14.2 Defect Reporting

- **Tool:** Excel Spreadsheet (`bug-reports/Bug_Reports_Signup_Authorized_Partner.xlsx`)
- **Format:** Structured template with steps to reproduce, expected vs. actual results, screenshots, and severity.

15. Test Metrics

Metric	Target
Total Test Scenarios	15+
Total Test Cases	30+
Automation Coverage	100%
Pass Rate Target	100%
Avg. Execution Time	~3–5 minutes per full run

16. Project Folder Structure
