

# Test Execution Report

## Authorized Partner - Signup Automation

### Test Summary

| Field            | Details                                                                                     |
|------------------|---------------------------------------------------------------------------------------------|
| Project Name     | Authorized Partner Signup Automation                                                        |
| Application URL  | <a href="https://authorized-partner.vercel.app/">https://authorized-partner.vercel.app/</a> |
| Test Date        | 06/23/2026                                                                                  |
| Test Environment | Windows 11 / Chrome 149                                                                     |
| Test Framework   | Selenium WebDriver + Mocha                                                                  |
| Test Status      | ✅ PASSED                                                                                    |

### Test Objective

To automate and validate the complete user signup flow for the Authorized Partner platform, ensuring all registration steps work correctly without manual intervention.

### Test Results Overview

| Phase | Test Case                            | Status   | Duration |
|-------|--------------------------------------|----------|----------|
| 0.1   | Navigate to Homepage and Click Login | ✅ PASSED | ~3s      |
| 0.2   | Click Sign Up on Login Page          | ✅ PASSED | ~2s      |
| 0.3   | Accept Terms and Conditions          | ✅ PASSED | ~3s      |
| 1     | Fill and Submit Signup Form          | ✅ PASSED | ~8s      |
| 2     | Verify OTP                           | ✅ PASSED | ~5s      |
| 3     | Fill Agency Details                  | ✅ PASSED | ~6s      |
| 4     | Fill Professional Experience         | ✅ PASSED | ~5s      |
| 5     | Complete Verification                | ✅ PASSED | ~4s      |

Total Test Cases: 8

Passed: 8

Failed: 0

Pass Rate: 100%

### Test Scenarios Covered

## **Phase 0: Navigation Flow**

### **1. Homepage Navigation**

- Navigate to base URL
- Locate and click Login button
- Verify redirect to login page

### **2. Login to Signup Transition**

- Locate "Sign Up" link on login page
- Click Sign Up link
- Verify navigation to registration page

### **3. Terms and Conditions**

- Wait for terms page to load
- Check the agreement checkbox
- Click Continue button
- Verify progression to signup form

## **Phase 1: Signup Form**

- Fill first name
- Fill last name
- Fill email address
- Select country code (+977)
- Fill phone number
- Fill password
- Fill confirm password
- Submit form
- Verify navigation to OTP page

## **Phase 2: OTP Verification**

- Wait for OTP page to load
- Enter OTP code
- Submit OTP
- Verify successful verification

## **Phase 3: Agency Details**

- Fill agency name
- Fill agency address
- Select agency type
- Fill additional details
- Submit form
- Verify progression

## **Phase 4: Professional Experience**

- Fill years of experience
- Select expertise areas
- Add qualifications
- Submit information
- Verify next step

## **Phase 5: Verification**

- Complete final verification steps
- Submit final form
- Verify successful completion

- Confirm redirect to dashboard/success page

---

## Technical Implementation

### Framework Architecture

- **Design Pattern:** Page Object Model (POM)
- **Language:** JavaScript (Node.js)
- **Test Framework:** Mocha
- **Automation Tool:** Selenium WebDriver
- **Browser:** Chrome (via Selenium Manager — auto-managed, no manual driver install needed)
- **Reporting:** Mochawesome

### Project Structure

```
project/
├── pages/                    # Page Object Model classes
│   ├── HomePage.js
│   ├── LoginPage.js
│   ├── TermsPage.js
│   ├── SignupPage.js
│   ├── OTPPage.js
│   ├── AgencyDetailsPage.js
│   ├── ProfessionalExpPage.js
│   └── VerificationPage.js
├── tests/                   # Automation test scripts
│   ├── completeSignup.test.js
│   └── completeSignup.mocha.test.js

```

### Key Features

-  Complete automation of signup flow
  -  No manual intervention required
  -  Automatic screenshot capture on failures
  -  Detailed console logging for debugging
  -  Multiple fallback strategies for element interaction
  -  Proper wait mechanisms for dynamic content
  -  Error handling and recovery
  -  Beautiful HTML test reports
-

## Test Data

| Field        | Value Type | Sample                                |
|--------------|------------|---------------------------------------|
| Email        | Dynamic    | vritqa.test2025+[timestamp]@gmail.com |
| Phone        | Random     | 98XXXXXXX                             |
| Name         | Static     | Test User                             |
| Password     | Static     | SecurePass123!                        |
| Country Code | Fixed      | +977 (Nepal)                          |

## Known Issues / Limitations

- OTP Automation:** Successfully implemented automated OTP retrieval via IMAP (Gmail API/App Passwords), achieving 100% headless execution without manual intervention
- Email Validation:** Uses Gmail plus addressing for unique email generation
- Network Dependency:** Test execution time varies based on network speed

## Recommendations

### For Future Improvements

- API Integration:** Integrate with email/SMS API for OTP retrieval
- Parallel Execution:** Run tests in parallel for faster execution
- Cross-Browser Testing:** Extend support to Firefox, Safari, Edge
- CI/CD Integration:** Add GitHub Actions or Jenkins pipeline
- Data-Driven Testing:** Use CSV/Excel for multiple test data sets
- Performance Metrics:** Add response time validation

## Test Environment Details

| Component          | Version/Details                  |
|--------------------|----------------------------------|
| Operating System   | Windows 11                       |
| Node.js            | v18+ (LTS)                       |
| Chrome Browser     | 149.x                            |
| ChromeDriver       | Auto-managed by Selenium Manager |
| Selenium WebDriver | 4.39.0                           |
| Mocha              | 11.7.5                           |

## Test Execution Steps

- Clone the repository
- Install dependencies: `npm install`
- Run the main automation: `npm start`

4. (Optional) Run with Mocha reporter: `npm run test:mocha`

5. View HTML report: `test-reports/index.html`

---

### Evidence

- **HTML Report:** Available in `test-reports/index.html`
  - **PDF Report:** Available in `test-reports/TEST_REPORT.pdf`
  - **Screenshots:** Captured automatically on failure in `bug-reports/` directory
  - **Console Logs:** Detailed step-by-step execution logs in terminal
- 

### Prepared By

**QA Engineer:** Kabir Khadka **Date:** 06/23/2026

---

### Conclusion

The automated signup flow for the Authorized Partner platform has been successfully implemented and tested. All test scenarios passed successfully with 100% pass rate. The automation framework follows industry best practices with Page Object Model design pattern, proper error handling, and comprehensive reporting.

The solution is production-ready and can be easily integrated into CI/CD pipelines for continuous testing.
